

## Sustainability Vision Statement of the University of Tunis

The University of Tunis envisions a sustainable future driven by innovative solutions to urgent social and environmental challenges. Through research, education, and community engagement, we aim to lead by example—integrating sustainability into every aspect of our operations, curriculum, and campus culture. Our commitment is to build a university environment rooted in equity, resilience, and environmental stewardship, for the benefit of current and future generations.

Our sustainability vision reflects a deep commitment to social justice, environmental responsibility, and long-term economic viability—both within our institution and in the broader community.

A key component of our sustainability efforts lies in enhancing energy efficiency. By reducing our environmental impact, conserving resources, and fostering a culture of responsible energy use, we are advancing toward a more sustainable campus. These efforts include upgrading infrastructure with energy-saving technologies such as LED lighting and smart temperature control systems, as well as conducting awareness campaigns to promote energy conservation among the university community.

Beyond lowering operational costs, these energy-efficient practices support the University's broader goal of becoming a leader in climate action and environmental stewardship. Our initiatives demonstrate the vital role that higher education institutions can play in driving sustainable development, aligning with national and global sustainability goals, and inspiring students and staff to adopt more sustainable lifestyles and professional practices.

In line with this commitment, the University of Tunis has entered into a partnership with the National Agency for Energy Management (ANME) to collaborate on:

- Feasibility studies and sustainable design
- Procurement of equipment and sustainable materials
- Installation and commissioning of energy-efficient systems
- Training programs and awareness-raising activities
- Continuous monitoring, maintenance, and performance evaluation
